

SunSet™ Wireless Synchronizer

The first wireless light sensor that automatically synchronizes your entire landscape lighting system with the sun.

Not a photocell.

SunSet™ is not a photocell. It uses the same light sensing technology used by the auto industry to control headlights. On/off times are intelligently synchronized without the unreliable performance of photocells or timers, so lights run when you need them. The result? Better performance and greater energy savings.

Completely wireless.

SunSet™ is completely wireless and works anywhere up to 500 feet of its ZoneControl base unit. One SunSet™ sensor synchronizes multiple transformers, so your entire system turns on and off in unison – either with the sun or at a time you specify – regardless of time zone or daylight savings time.

Better. Faster. Easier.

Add SunSet™ to your system and it goes to work. There is no complicated installation, and nothing to reset. With its long battery life and durable construction, SunSet™ is designed to enhance your entire outdoor living experience by making your lighting system more reliable, energy efficient, and easy to use.

Technical Specifications

Wireless Range: 100 feet to 500 feet (dependent on installation environment)

Battery Life: 3 year battery life (Reliable battery operating range between -40C to +70C)

Compatibility: Compatible with ABT Zone Control.

Durable Housing: UV protected polycarbonate housing

Mounting: Includes mounting options for stake and wall mounting

Synchronizing: Each light sensor can synchronize multiple transformers.
